Wifi setup & fixing browser issues on the ipads

On your device choose the **SBC-Inspire-Learning** **ssid.**

You will be asked for a password. Use **education**

If safari browser isn't working 9 times out of 10 the fix is easy

Try this first:

Reset the network settings (in settings – general – reset)

After it reboots put your PIN into the device as normal. Once you are logged in open your safari browser and see if you can get to the Wikipedia or BBC web pages.

Then

If you get a proxy authentication error this is the fix:

Username = cluster1\your-curricular-system-username

for example **cluster1\jsmith115**

Password = your system password login for example **jellybeans**

If its still playing up you may need a profile reset – come & find Ross & I will see if I can sort it
